NOTE: This is a 'working draft' sequence. It currently consists of 15 contigs. The true order of the pleces as not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Worley, K.C.

NOTE: This is a 'working draft' sequence. It currently consists of 38 contigs. The true order of the pieces is a sequence frown and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Consensus quality: 54982 bases at least Q40

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Contact: sequence_submissions@genome.wi.mit.edu

TITLE JOURNAL

COMMENT

```
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >-30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw: SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP: Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human thtp://www.sanger.ac.uk/HGF/Chr13

RPI1-103K9 is from the library RPC1-11.1 constructed by the group of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PRI 20-NOV-1999

IMPORTANT: This sequence is not the entire insert of clone
RRD1-103K9 It may be shorter because we sequence overlapping
sections only once, except for a short overlap.
The true left end of clone RP11-431022 is at 84860 in this
sequence. The true right end of clone RP11-209319 is at 2000 in
this sequence.

E. coli transposon sequences which integrated in the original/previous sequences which integrated in the original/previous sequences which integrated in the original/previous sequences experimentally, removed the insertion sequences. Teconstituted the present data. The sequencing project is supported by Japan Science Technology Corporation (JST) and The Insertion and The Insertiuc of Physical and Chemical Research (RIKEN).

On Jun 20, 2000 this sequence version replaced gi:8573762.

During sequence assembly data is compared from overlapping clones, where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: EMBL: Sw: SWISSPROT: Tr: TREMBL: WP: WORMPEP: Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence chromosome 20, constructed by the Sanger Centre Chromosome 20 http://www.sanger.ac.uk/HGP/Chr20

MAPPING Group Further information can be found at http://www.sanger.ac.uk/HGP/Chr20

IMPORTANT: This sequence is not the entire insert of clone RP4-530151 in may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.

The true right end of clone RP4-530115 is at 111039 in this sequence. The true right end of clone RP6-8941K is at 101 in his sequence. The true right end of clone RP6-8941K is at 101 in this sequence. The true right end of clone RP6-8941K is at 101 in this sequence. The sequence was finished as follows unless otherwise noted all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequenced by at least one plasmid subclone; and the assembly was confirmed by restriction digest.

RP4-53015 if is from the library RPCI-4 constructed by the group of pieter deline assembly was confirmed subclone; and the assembly was confirme

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Constructed at the Institute for Genomic Research (TIGR),
Constructed at the Institute for Genomic Research (TIGR),
Constructed at the Institute for Genomic Public From a cloned population of
Rockville, MD. Genomic DNA isolated from a cloned population of
trypanosoma brucei (TRE0927/4 GUTat 10.1) was mechanically sheared
to give a tight size distribution (
4 kb). The v +1 method used for the library construction is
described in detail in Smith, H. and Venter, J.C. (Making small
insert libraries for whole genome shotgun sequencing projects. In
Genome Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barrell, Oxford University Press, 1999).
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Trypanosoma.

                                                                                                                                                                                                                                                                                                                                                                                  셤
/Jab_host="E. Coli strain XL10-Gold, T1-resistant, F-"
/note="Vector: PWD42nv; Purified genomic DNA from M.
musculus C57BL/60 (male) was obtained from the Jackson
Laboratory Mouse DNA Resource
(http://www.jax.org/resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polymucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarcse gel
electrophoresis. Vector DNA was prepared from a derivative
of pWD42 (gil4732114 jpblAF129072.1), a copy-number
inductible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
chemically-competent E. coli XL10-Gold (Stratagene) cells
and selected for amplicillin resistance."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

: Sequence 53, Application US/08231193A
: Patent No. 5849895
: Patent No. 5849895
: GENERAL INFORMATION:
APPLICANT: Elia, Steven B.
APPLICANT: Lia, Chin-Chun
TITLE OF INVENTION: HUMAN N-METHYL-D-ASPARTATE RECEPTOR
TITLE OF INVENTION: HUMAN N-METHYL-D-ASPARTATE RECEPTOR
TITLE OF INVENTION: GROWN N-METHYL-D-ASPARTATE RECEPTOR
TITLE OF INVENTION: HUMAN N-METHYL-D-ASPARTATE RECEPTOR
TITLE OF INVENTION:
TITLE OF INVENTION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match 47.5%; Score 19; DB 1; Length 2515; Best Local Similarity 51.4%; Pred. No. 60; Matches 18; Conservative 7; Mismatches 10; Indels
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/061,465
FILING DATE: 19930512
CLASSIFICATION: 435
ATTONEY/AGENT INFORMATION:
NAME: PEFTYMENT DAVID G.
REGISTRATION NUMBER: 33,438
REFERENCE/DOCKET NUMBER: 1414.069
TELECOMMUNICATION INFORMATION:
TELECOMMUNICATION OF 3:
SEQUENCE CHARACTERISTICS:
LENGTH: 2515 base pairs
TYPE: NUCLEIC ACID
STRANDEDNESS: SINGIE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SOFTWARE: Patentin Release #1.0, Version #1.25

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Description

                                                                                                                                                                                                                                                                          Gaps
herpesvirus infections e.g. primary or chronic infections with human
                                                                  The invention relates to polynucleotide ligands which bind to herpesvirus, particularly human cytomegalovirus (HCMV) to decrease or block HCMV infection in target cells. These ligands are used as anti-viral agents for the treatment of herpesvirus infections (e.g. lesions and herpetic ulcers) and particularly HCMV associated primary or chronic infections such as pneumonia, gastroenteritis and chorioretinitis. The present sequence is DNA ligand which bind to HCMV to decrease or block HCMV infection in target cells.
                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /*tag= a

The invention relates to polynucleotide ligands which bind to herpesvirus, particularly human cytomegalovirus (HCMV) to decrease or block HCMV infection in target cells. These ligands are used as anti-viral agents for the treatment of herpesvirus infections (e.g. lesions and herpetic ulcers) and particularly HCMV associated primary or chronic infections such as pneumonia, gastrometeritis and chorioretinitis. The present sequence is DNA ligand which bind to HCMV to decrease or block HCMV infection in target cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human musculoskeletal system related polynucleotide SEQ ID NO 3959.
                                                                                                                                                                                                                                                                                                                                                                                                                           ö

(HUMA-) HUMAN GENOME SCI INC.

SM Rosen CA, Barash SC,

WPI; 2001-451937/48.

Isolated polypeptide for treating, preventing and/or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g. diagnosis

Example 2; SEQ ID NO 3959; 781pp + Sequence Listing; English.

The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliotating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (art)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune chisorders e.g. Addison's alsease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular discenses such as myocardial ischaemias; (d) wound parasitic infectious diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.WIPO.int/Pub/Published_pct_sequences.

Sequence 8439 BP; 1748 A; 2333 C; 2307 G; 2051 T; 0 other;
